Dear Hiring Manager,

As a kid, I was drawing sports cars since I had memories of dreaming to create them. As I was growing, I knew that the technology was going to be an elementary part of the cars. That's why I studied Mechatronic Engineering and Software Development Technologist, to know how to work with them. Now I want to use my knowledge with your company to continue improving the best sports car brand in the world.

With my degrees and thanks to my work experience in MADEXA TRIPLAYSHOP, SITEUR and PROESA-ATOTECH, in different job positions, I believe I have the skills and experience necessary to excel in this role, because those experiences give me the ability to have a high capacity for resilience and learning fast new technologies, environments, and different activities like give maintenance or management to equipment and systems for Radiocommunications, infrared barriers, SCADA, access control, fire detection, IP cameras, switches, servers, hydraulic and mechanical equipment, supervise the installation of 10 km of fiber optic network, analyze metallic or non-metallic chemical solutions used in electroplating, coating metal sheets with electroplating, preparation of chemical solutions, handling UV spectrophotometers, and volumetric materials, being proactive and with experience in working as a team, solving complex situations, tasks, and problems, thanks to my emotional intelligence used in those situations.

Now I want to follow my passion for sports cars that I have had since birth, using this and more skills that I have to improve the quality and productivity in your car company to contribute with your work team, because my life goal is to develop innovative projects for the automotive industry. Thank for your time and consideration, have a nice day.

Best Regards,

Abner Emmanuel Becerra Valencia
