**Dear Hiring Manager,**

As a kid, I was drawing sports cars since I had memories of dreaming to create them. As I was growing, I knew that the technology was going to be an elementary part of the cars. That's why I studied Mechatronic Engineering and Software Development Technologist, to know how to work with them. Now I want to use my knowledge with your company to continue improving cars.

With my degrees and thanks to my work experience I believe I have the skills and experience necessary to excel in this role, because those experiences give me the ability to have a high capacity for resilience and learning fast new technologies, environments, and different activities, being proactive and with experience in working as a team, solving complex situations, tasks, and problems, thanks to my emotional intelligence used in those situations.

Now I want to follow my passion for cars that I have had since birth, using this and more skills that I have to improve the quality and productivity in your company to contribute with your work team, because my life goal is to develop innovative projects for the automotive industry. Thank for your time and consideration, have a nice day.

**Best Regards,**

*Abner Emmanuel Becerra Valencia*
